

## **LiftMaster® Residential Jackshaft Opener and Fingerprint Keyless Entry Honored for Design Excellence**

Design Journal recently announced the recipients of the 2008/2009 Awards for Design Excellence (ADEX), honoring Chamberlain® Professional Products with two medals. Chamberlain received Platinum ADEX awards for both the LiftMaster® Residential Jackshaft Opener (RJO Model 3800) and the LiftMaster Fingerprint Keyless Entry (Model 379LM), both of which provide dealers with additional points of differentiation from competitors as well as leverage in the field, especially among builders, architects and designers.

The ADEX awards, one of the largest and most prestigious award programs for product design of furniture, fixtures and finishes, is marketed to the design trade community. Design Journal, the international trade publication for interior designers, architects and facility managers, sponsors the ADEX awards.

"Receiving acknowledgment for the design and aesthetics of our products from a collection of leaders in the design industry is an honor that reinforces our history of innovation, engineering and product development," states Dan Nixa, director of marketing, Chamberlain Professional Products. "Not only do LiftMaster products offer the highest levels of performance, but they also look good doing it – and we're proud of that."

Equipped to support unique applications found in today's garages, while also meeting the demands of homeowners for top of the line appliances in every area of the home, the Residential Jackshaft Opener Model 3800 features an ultra-quiet 24V DC motor and is designed to be mounted on the wall beside the garage door. This innovative yet practical application frees up valuable storage space on the garage ceiling, further elevating the garage as an extension of the home and the most functional space in the house. Compatible with sectional doors up to 14-feet high, the model 3800 meets all UL325 requirements and comes equipped with the EverCharge® Standby Power System. This unique battery backup system continues to open and close the garage door even during a power outage for up to two days and provides homeowners with a safe, practical and reliable access solution.

The other Platinum ADEX award-winning LiftMaster product is the Fingerprint Keyless Entry, which provides keyless, codeless home access with the simple and secure touch of a finger. Designed to allow homeowners to instantly open a garage door or gate by sliding their finger across the wall-mounted pad, the Fingerprint Keyless Entry eliminates the need to memorize a code while preventing it from being shared with unwanted guests. In order to better equip dealers with an access system that meets the demands of their customers, such as multiple family members needing access, kids entering the home after school, neighbors checking on pets or collecting the mail while homeowner is out of town, the Fingerprint Keyless Entry reads up to 10 unique fingerprints. Installation is quick and easy, and the Fingerprint Keyless Entry unit can be easily programmed to the garage door opener or gate operator. The LiftMaster Fingerprint Keyless Entry is available exclusively through authorized LiftMaster dealers.
